

Addendum, when original is read in zVision and **Additional Study Info** available workflow:

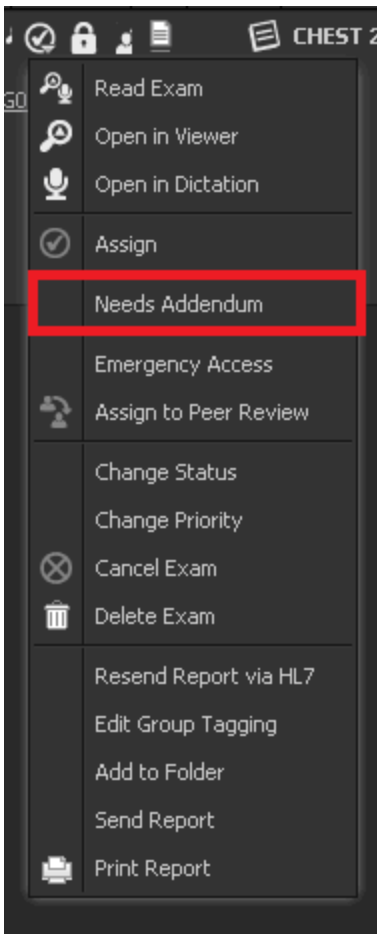

Look up patient exam in zVision (bottom left corner)

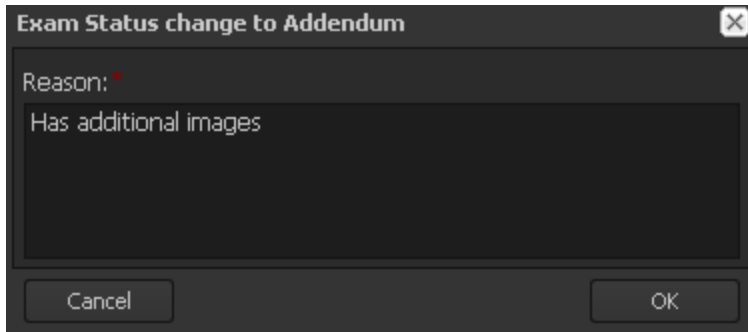

Find exam and single click to get to patient view

For Addendum **AND** Additional Info avail: In notes tab section add an Exam Note = "NEEDS ADDENDUM" and add info as to why.

Then you MUST assign the exam to the radiologist who needs to complete it, and notify them directly. If they were the original reader it ought to be already assigned to that Rad. Please verify

It will then appear in their Enterprise "Addendum\Exams assigned to me" worklist; from there launch READ EXAM as usual

I do expect you will need to TV to the Rads and show them this workflow a few times, please do not let them fumble through!

Possible Addendum for new study info (priors, pathology, new images etc.)

If the Radiologist determines that the new exam info does NOT justify an addendum, they can then click the Diamond Icon = 'Addendum Not Needed' this will add a note and change the exam status back to final then removing it from the Rads addendum worklist folder.
